

NetScaler FIPS Data Sheet

Delivering scalability and performance for enterprises with the highest security requirements

NetScaler is an application security and delivery platform that helps you scale and protect your applications using data and insights to enable peak performance. Whether you're delivering applications to your customers, your workforce, or both, NetScaler helps you do it reliably and securely.

NetScaler is built on a single operating system, so no matter which ADC form factors you choose — hardware or software or a mix — you'll manage them from one place. The operational consistency and deep observability you get with NetScaler makes it easier to apply consistent security policies and to troubleshoot faster.

With Citrix Universal Hybrid Multi-Cloud License and Citrix Platform License, you can reallocate throughput capacity and instances to wherever you need them at any time. No matter where you choose to deploy your ADCs — on-premises, public cloud, or both — your subscription price will remain the same.

NetScaler FIPS

What is FIPS?

The Federal Information Processing Standard (FIPS) 140-2 and 140-3 are standards and guidelines developed by National Institute of Standards and Technology (NIST) used to evaluate and approve cryptographic modules.

NetScaler FIPS

NetScaler offers specific physical and virtual platforms with FIPS 140-2 certification and FIPS 140-3 certification (VPX module in process) to meet the most stringent compliance mandates and security requirements.
